Seravian Platform – User Roles and Access Policy

This document outlines the role-based access permissions and responsibilities within the **Seravian Platform**, along with the platform's commitment to user privacy and responsible data use.

1. User Roles and Permissions

A. End User (Patient/User)

Description:

Patients are individuals seeking mental health support through the AI-based assistant and/or licensed doctors.

Permissions: - Register and verify an account via email OTP. - Complete profile with required personal data. - Initiate and manage AI chatbot sessions. - Send and receive text and audio messages only. - View personal diagnosis history and AI insights. - Book and join appointments with verified doctors.

Restrictions: - Cannot access admin or doctor dashboards. - Cannot view data belonging to other users.

B. Doctor

Description:

Doctors are licensed medical professionals who consult with patients.

Permissions: - Register and complete profile details. - Submit credentials for verification, including academic and professional documentation. - Undergo a **mandatory online meeting with the HR department of Seravian** as part of the verification process. - **Doctors will be contacted via their registered email to schedule the HR meeting.** - View schedules and diagnostic data related to their own patients. - **Conduct video sessions** with patients as part of scheduled consultations. - May request relevant personal or medical information from the patient if necessary for the consultation, diagnosis, or treatment planning — in accordance with ethical and professional standards.

Restrictions: - Cannot view other doctors' patients or sessions. - Cannot verify new doctors or access admin functions. - Cannot alter platform AI behavior.

C. Admin

Description:

Admins manage the platform's operations and maintain system integrity.

Permissions: - Manage users and doctors, including suspensions and removals. - Verify doctor identities and documents. - Conduct or coordinate online HR meetings as part of doctor verification. - View all platform data including sessions and logs. - Configure system-wide settings, including AI parameters. - Monitor and audit activity across the platform.

Restrictions: - Admins have full system access. Actions are subject to audit policies.

2. Data Privacy and Responsible Usage Policy

At **Seravian**, user data privacy is a foundational principle. The platform implements strict technical and ethical standards to protect personal information and maintain trust.

Data Ownership and Confidentiality

- All data (text, audio messages, and diagnostic feedback) provided by users remains the **sole property of the user**.
- Data is stored securely and is accessible only to the user, their assigned doctor (if any), and platform administrators where necessary.
- Doctors and admins are bound by confidentiality agreements regarding all accessed information.

Use of AI and Machine Learning

- The AI chatbot is used solely for real-time assistance and mental health analysis.
- **User data is not used for training AI models**, now or in the future.
- The AI does not record or learn from individual user interactions for model improvement.

No Commercial Exploitation

- User data will **never be sold, licensed, or shared** with third-party organizations, advertisers, or corporate entities.
- **Seravian does not monetize user content** and forbids any form of commercial use, data exploitation, or profiling.

Academic and Research Integrity

- Seravian is a **non-commercial, academic project** designed for educational and humanitarian purposes.

- Any use of anonymized data for academic reporting (e.g., in project evaluation or publications) will occur only with explicit prior user consent and proper anonymization.

Security and Data Access

- All communications (including text and audio) are encrypted during transmission and storage.
 - Access to data is tightly role-based and audited to prevent misuse.
 - Regular reviews ensure compliance with local data protection regulations and ethical standards.
-

3. Policy Enforcement and Violations

- Any role found misusing platform privileges will be subject to account suspension or permanent ban.
 - Violations of the privacy policy, including unauthorized access, disclosure, or exploitation of data, will be investigated and handled in accordance with applicable regulations and ethical guidelines.
